Bronte Melrose Jackets Measurements

Actual Jacket Measurements

- A = Jacket body measurement
- B = Shoulder & sleeve
- C = From collar seam to hem
- D = Underarm measurement

Measuring

Size is something all on it's own every brand has it's own size specifications, the safest way is to measure if possible from a jacket of a similar style does your son, daughter, mum or dad have any jackets of a similar style? this makes the job 90% easier even if it is too small it will give you a guide of how much extra to add. As Bronte jackets are generous in the body sometimes it's best to work from body length and shoulder / arm measurements.

Where to measure:

Zip it up and lay it face down, hopefully the picture below will give you an idea of what to do any style jacket is better to get a guide from than nothing so many of these jackets are presents it's almost impossible to guess but remember this is a blouson style supposed to be worn loose the shoulder and sleeve are going to need more than a usual jacket to allow plenty of movement when riding or working around the yard to stop the sleeve riding up and looking too short, also very important think about what will be worn underneath baggy is fine in the summer too small in the winter is a problem.

Measure under the sleeve

Measure seam to seam across chest under the sleeve

Measure body length

Measure shoulder and sleeve

I am here to help and it doesn't matter how many questions you need to ask getting the jacket right is the most important thing.
